

config.js

- Analyzing the source code
 - 1. Get the room configuration
 - 2. Get the video streams list with access to local media devices
 - 3. Get the audio streams list with access to local media devices
 - 4. Get local media devices access and add the stream to list
 - 5. Get media devices access according to constraints
 - 5.1. Audio constraint set up
 - 5.2. Video constraints set up
 - 5.3. Screen capture constraints set up
 - 5.4. Get local media devices access

The functions to configure the room connection and local media access are moved to config.js module. The configuration file example follows:

config.json

```
{  
  "room": {  
    "url": "ws://127.0.0.1:8080",  
    "name": "ROOM1",  
    "pin": "1234",  
    "nickName": "User1",  
    "failedProbesThreshold": 5,  
    "pingInterval": 5000  
  },  
  "media": {  
    "audio": {  
      "tracks": [  
        {"source": "mic",  
         "channels": 2,  
         "type": "mic1"}  
      ]  
    },  
    "video": {  
      "tracks": [  
        {  
          "source": "camera",  
          "width": 1280,  
          "height": 720,  
          "codec": "H264",  
          "constraints": {  
            "frameRate": 25  
          },  
          "encodings": [  
            {"rid": "180p", "active": true, "maxBitrate": 200000, "scaleResolutionDownBy": 4},  
            {"rid": "360p", "active": true, "maxBitrate": 500000, "scaleResolutionDownBy": 2},  
            {"rid": "720p", "active": true, "maxBitrate": 900000}  
          ],  
          "type": "cam1"  
        }  
      ]  
    }  
  }  
}
```

Analyzing the source code

To analyze config.js source code take the version available [here](#)

1. Get the room configuration

getRoomConfig() [code](#)

```

const getRoomConfig = function(config) {
  let roomConfig = {
    url: config.room.url || "ws://127.0.0.1:8080",
    roomName: config.room.name || "ROOM1",
    pin: config.room.pin || "1234",
    nickname: config.room.nickName || "User1"
  };
  if (config.room.failedProbesThreshold !== undefined) {
    roomConfig.failedProbesThreshold = config.room.failedProbesThreshold;
  }
  if (config.room.pingInterval !== undefined) {
    roomConfig.pingInterval = config.room.pingInterval;
  }
  return roomConfig;
}

```

2. Get the video streams list with access to local media devices

`getVideoStreams()` [code](#)

```

const getVideoStreams = async function(config) {
  let streams = [];
  if (config.media && config.media.video && config.media.video.tracks) {
    streams = await getStreams(config.media.video.tracks);
  }
  return streams;
}

```

3. Get the audio streams list with access to local media devices

`getAudioStreams()` [code](#)

```

const getAudioStreams = async function(config) {
  let streams = [];
  if (config.media && config.media.audio && config.media.audio.tracks) {
    streams = await getStreams(config.media.audio.tracks);
  }
  return streams;
}

```

4. Get local media devices access and add the stream to list

`getStreams()` [code](#)

```

const getStreams = async function(tracks) {
  let streams = [];
  for (let track of tracks) {
    let stream = await getMedia(track);
    if (stream) {
      streams.push({
        stream: stream,
        encodings: track.encodings,
        source: track.source,
        type: track.type
      });
    }
  }
  return streams;
}

```

5. Get media devices access according to constraints

5.1. Audio constraint set up

[getMedia\(\)](#) [code](#)

```
const getMedia = async function(track) {
    //convert to constraints
    let screen = false;
    const constraints= {};
    if (track.source === "mic") {
        //audio
        constraints.audio = {};
        if (track.constraints) {
            constraints.audio = track.constraints;
        }
        constraints.audio.stereo = track.channels !== 1
        if (track.channels && track.channels === 2) {
            constraints.audio.echoCancellation = false;
            constraints.audio.googEchoCancellation = false;
        }
    } else if (track.source === "camera") {
        ...
    } else if (track.source === "screen") {
        ...
    }
    ...
    return stream;
}
```

5.2. Video constraints set up

[getMedia\(\)](#) [code](#)

```
const getMedia = async function(track) {
    //convert to constraints
    let screen = false;
    const constraints= {};
    if (track.source === "mic") {
        ...
    } else if (track.source === "camera") {
        constraints.video = {};
        if (track.constraints) {
            constraints.video = track.constraints;
        }
        constraints.video.width = track.width;
        constraints.video.height = track.height;
    } else if (track.source === "screen") {
        ...
    }
    ...
    return stream;
}
```

5.3. Screen capture constraints set up

[getMedia\(\)](#) [code](#)

```

const getMedia = async function(track) {
    //convert to constraints
    let screen = false;
    const constraints= {};
    if (track.source === "mic") {
        ...
    } else if (track.source === "camera") {
        ...
    } else if (track.source === "screen") {
        constraints.video = {};
        if (track.constraints) {
            constraints.video = track.constraints;
        }
        constraints.video.width = track.width;
        constraints.video.height = track.height;
        screen = true;
    }
    ...
    return stream;
}

```

5.4. Get local media devices access

`getMedia()` code

```

const getMedia = async function(track) {
    //convert to constraints
    let screen = false;
    const constraints= {};
    if (track.source === "mic") {
        ...
    } else if (track.source === "camera") {
        ...
    } else if (track.source === "screen") {
        ...
    }

    //get access to a/v
    let stream;
    if (screen) {
        stream = await navigator.mediaDevices.getDisplayMedia(constraints);
    } else {
        stream = await navigator.mediaDevices.getUserMedia(constraints);
    }
    return stream;
}

```
