

# iOS Two-way Streaming

## Example of iOS application with player and streamer

This streamer can be used to publish WebRTC video stream and play any of the following types of streams on Web Call Server

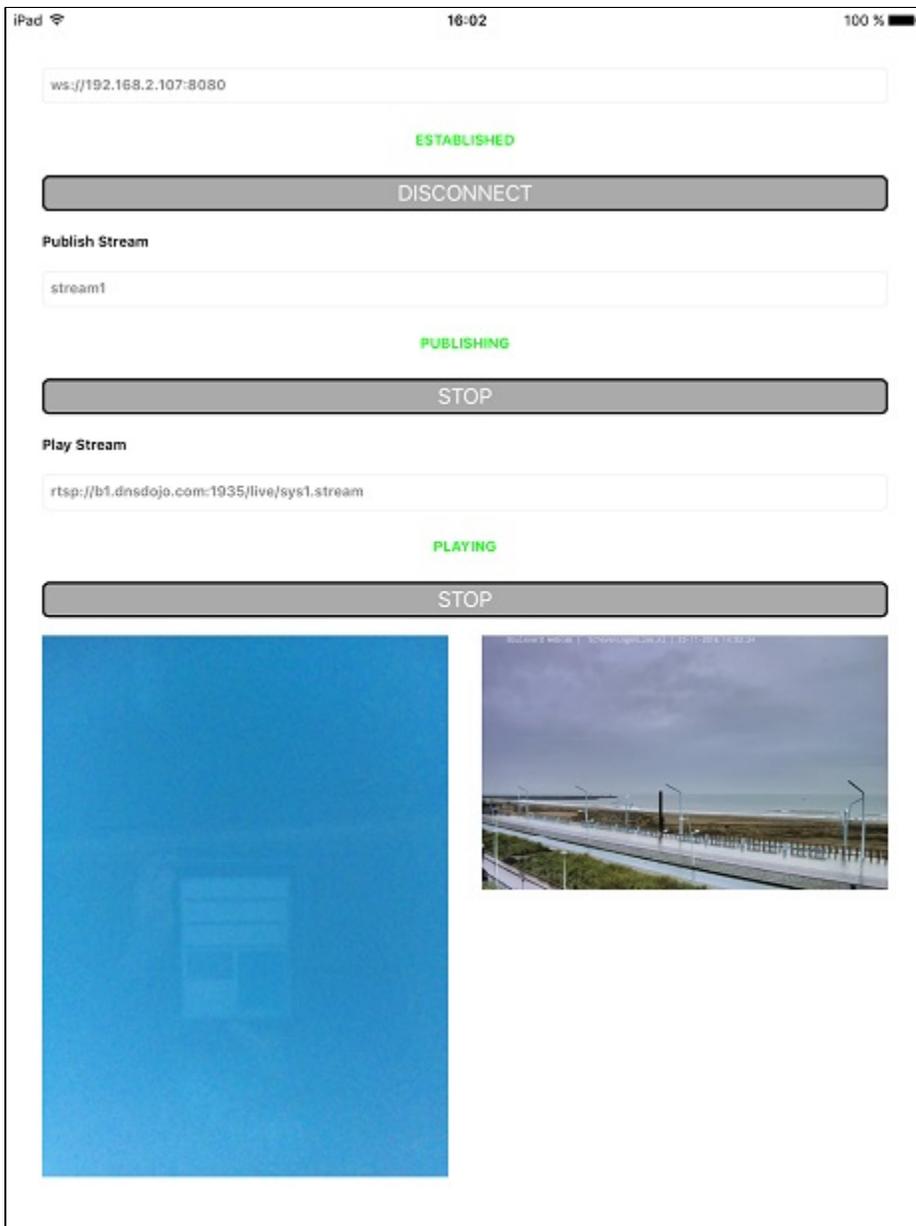

- RTSP
- WebRTC
- RTMP
- RTMFP

On the screenshot below the example is displayed when a stream is being published and another stream is being played.  
Input fields

- 'WCS URL', where 192.168.2.107 is the address of the WCS server
- 'Publish Stream' - for the name of published stream
- 'Play Stream' - for the name of played stream

Two videos are played

- left - video from the camera
- right - the played video stream

## Work with code of the example

To analyze the code, let's take TwoWayStreaming example, which can be downloaded with corresponding build [2.5.2](#).

View class for the main view of the application: ViewController (header file [ViewController.h](#); implementation file [ViewController.m](#)).

### 1. Import of API [code](#)

```
#import <FPWCSSApi2/FPWCSSApi2.h>
```

### 2. Session creation and connection to server.

FPWCSSApi2 createSession, FPWCSSApi2Session connect [code](#)

The options include:

- URL of WCS server
- appKey of internal server-side application (defaultApp)

```
- (FPWCSSApi2Session *)connect {
    FPWCSSApi2SessionOptions *options = [[FPWCSSApi2SessionOptions alloc] init];
    options.urlServer = _connectUrl.text;
    options.appKey = @"defaultApp";
    NSError *error;
    FPWCSSApi2Session *session = [FPWCSSApi2 createSession:options error:&error];
    ...
    [session connect];
    return session;
}
```

### 3. Stream publishing.

FPWCSSApi2Session createStream, FPWCSSApi2Stream publish [code](#)

Object with next stream options is passed to createStream method:

- stream name
- view to display video
- 'true' for parameter 'record' to enable stream recording
- video constraints for iPad

```

- (FPWCSEApi2Stream *)publishStream {
    FPWCSEApi2Session *session = [FPWCSEApi2 getSessions][0];
    FPWCSEApi2StreamOptions *options = [[FPWCSEApi2StreamOptions alloc] init];
    options.name = _localStreamName.text;
    options.display = _localDisplay;
    if ( UI_USER_INTERFACE_IDIOM() == UIUserInterfaceIdiomPad ) {
        options.constraints = [[FPWCSEApi2MediaConstraints alloc] initWithAudio:YES videoWidth:640 videoHeight:
480 videoFps:15];
    }
    NSError *error;
    FPWCSEApi2Stream *stream = [session createStream:options error:&error];
    ...
    if(![stream publish:&error]) {
        UIAlertController * alert = [UIAlertController
            alertControllerWithTitle:@"Failed to publish"
            message:error.localizedDescription
            preferredStyle:UIAlertControllerStyleAlert];

        UIAlertAction* okButton = [UIAlertAction
            actionWithTitle:@"Ok"
            style:UIAlertActionStyleDefault
            handler:^(UIAlertAction * action) {
                [self onUnpublished];
            }];

        [alert addAction:okButton];
        [self presentViewController:alert animated:YES completion:nil];
    }
    return stream;
}

```

#### 4. Switching camera while publishing stream

FPWCSEApi2Stream switchCamera[code](#)

```

- (void)switchCameraButton:(UIButton *)button {
    if ([FPWCSEApi2 getSessions].count) {
        FPWCSEApi2Session *session = [FPWCSEApi2 getSessions][0];
        NSArray *streams = [session getStreams];
        for (FPWCSEApi2Stream *stream in streams) {
            if ([stream isPublished]) {
                NSLog(@"Found published stream, switching camera");
                [stream switchCamera];
            }
        }
    } else {
        NSLog(@"No active sessions found");
    }
}

```

#### 5. Stream playback.

FPWCSEApi2Session createStream, FPWCSEApi2Stream play[code](#)

Object with next stream options is passed to createStream method:

- stream name
- view to display video

```

- (FPWCSApi2Stream *)playStream {
    FPWCSApi2Session *session = [FPWCSApi2 getSessions][0];
    FPWCSApi2StreamOptions *options = [[FPWCSApi2StreamOptions alloc] init];
    options.name = _remoteStreamName.text;
    options.display = _remoteDisplay;
    NSError *error;
    FPWCSApi2Stream *stream = [session createStream:options error:nil];
    ...
    if(![stream play:&error]) {
        UIAlertController * alert = [UIAlertController
            alertControllerWithTitle:@"Failed to play"
            message:error.localizedDescription
            preferredStyle:UIAlertControllerStyleAlert];

        UIAlertAction* okButton = [UIAlertAction
            actionWithTitle:@"Ok"
            style:UIAlertActionStyleDefault
            handler:^(UIAlertAction * action) {

            }];

        [alert addAction:okButton];
        [self presentViewController:alert animated:YES completion:nil];
    }
    return stream;
}

```

#### 6. Stop of stream playback.

##### FPWCSApi2Stream stopcode

```

- (void)playButton:(UIButton *)button {
    [self changeViewState:button enabled:NO];
    if ([button.titleLabel.text isEqualToString:@"STOP"]) {
        if ([FPWCSApi2 getSessions].count) {
            FPWCSApi2Stream *stream;
            for (FPWCSApi2Stream *s in [[FPWCSApi2 getSessions][0] getStreams]) {
                if ([[s getName] isEqualToString:_remoteStreamName.text]) {
                    stream = s;
                    break;
                }
            }
            if (!stream) {
                NSLog(@"Stop playing, nothing to stop");
                [self onStopped];
                return;
            }
            NSError *error;
            [stream stop:&error];
        } else {
            NSLog(@"Stop playing, no session");
            [self onStopped];
        }
        ...
    }
}

```

#### 7. Stop of stream publishing.

##### FPWCSApi2Stream stopcode

```

- (void)publishButton:(UIButton *)button {
    [self changeViewState:button enabled:NO];
    if ([button.titleLabel.text isEqualToString:@"STOP"]) {
        if ([FPWCSApi2 getSessions].count) {
            FPWCSApi2Stream *stream;
            for (FPWCSApi2Stream *s in [[FPWCSApi2 getSessions][0] getStreams]) {
                if ([[s getName] isEqualToString:_localStreamName.text]) {
                    stream = s;
                    break;
                }
            }
            if (!stream) {
                NSLog(@"Stop publishing, nothing to stop");
                [self onUnpublished];
                return;
            }
            NSError *error;
            [stream stop:&error];
        } else {
            NSLog(@"Stop publishing, no session");
            [self onUnpublished];
        }
        ...
    }
}

```

#### 8. Disconnection.

FPWCSApi2Session disconnect[code](#)

```

- (void)connectButton:(UIButton *)button {
    [self changeViewState:button enabled:NO];
    if ([button.titleLabel.text isEqualToString:@"DISCONNECT"]) {
        if ([FPWCSApi2 getSessions].count) {
            FPWCSApi2Session *session = [FPWCSApi2 getSessions][0];
            NSLog(@"Disconnect session with server %@", [session getServerUrl]);
            [session disconnect];
        } else {
            NSLog(@"Nothing to disconnect");
            [self onDisconnected];
        }
        ...
    }
}

```
