

Two Way Streaming React

- [Описание](#)
- [Сборка проекта](#)
- [Работа с кодом примера](#)

Описание

Приложение Two Way Streaming React показывает пример использования Web SDK в React приложении для публикации и проигрывания WebRTC потока

Проект доступен на [GitHub](#), а также в [архивах сборок Web SDK](#) по следующему пути examples/react/two-way-streaming-react, начиная со сборки 2.0.201.

Сборка проекта

1. Загрузите исходные тексты WebSDK

```
git clone https://github.com/flashphoner/flashphoner_client.git
```

2. Перейдите в каталог примера

```
cd flashphoner_client/examples/react/two-way-streaming-react
```

3. Установите зависимости

```
npm install
```

4. Запустите сборку для локального тестирования

```
npm start
```

или для выгрузки на свой веб-сервер

```
npm run build
```

Работа с кодом примера

Для разбора исходного кода примера возьмем версию с хэшем 456b1c7, которая доступна [здесь](#), а также в сборке Web SDK 2.0.201

Код приложения расположен в файле [TwoWayStreamingApp.js](#), дополнительные функции в файле [fp-utils.js](#)

1. Импорт API

[code](#)

```
import * as FPUtils from './fp-utils.js';
import * as Flashphoner from '@flashphoner/websdk';
```

2. Инициализация API

Flashphoner.init() [code](#)

```
componentDidMount() {
  try {
    Flashphoner.init({});
    ...
  }
  catch(e) {
    console.log(e);
    ...
  }
}
```

3. Подключение к серверу и получение события, подтверждающего установку соединения

Flashphoner.createSession(), SESSION_STATUS.ESTABLISHED [code](#)

```
onConnectClick = () => {
  let app = this;
  let url = this.state.serverUrl;
  let session = this.state.session;

  if (!session) {
    console.log("Create new session with url " + url);
    app.setState({connectButtonDisabled: true, serverUrlDisabled: true});
    Flashphoner.createSession({urlServer: url}).on(SESSION_STATUS.ESTABLISHED, (session) => {
      app.setState({sessionStatus: SESSION_STATUS.ESTABLISHED, sessionStatusClass: 'text-success'});
      app.onConnected(session);
    }).on(SESSION_STATUS.DISCONNECTED, () => {
      ...
    }).on(SESSION_STATUS.FAILED, () => {
      ...
    });
  }
  ...
}
```

4. Публикация потока

Session.createStream(), Stream.publish() [code](#)

```

publishStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.publishStreamName;
  let localVideo = this.state.localVideo;

  if(session && localVideo) {
    session.createStream({
      name: streamName,
      display: localVideo,
      cacheLocalResources: true,
      receiveVideo: false,
      receiveAudio: false
    }).on(STREAM_STATUS.PUBLISHING, (stream) => {
      ...
    }).on(STREAM_STATUS.UNPUBLISHED, () => {
      ...
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).publish();
  }
}

```

5. Получение события, подтверждающего публикацию

STREAM_STATUS.PUBLISHING [code](#)

```

publishStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.publishStreamName;
  let localVideo = this.state.localVideo;

  if(session && localVideo) {
    session.createStream({
      ...
    }).on(STREAM_STATUS.PUBLISHING, (stream) => {
      app.setState({publishStatus: STREAM_STATUS.PUBLISHING, publishStatusClass: 'text-success'});
      app.onPublishing(stream);
    }).on(STREAM_STATUS.UNPUBLISHED, () => {
      ...
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).publish();
  }
}

```

6. Воспроизведение потока, изменение размера отображаемой картинки

Session.createStream(), Stream.play(), STREAM_STATUS.PENDING, FPUtills.resizeVideo() [code](#)

```

playStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.playStreamName;
  let remoteVideo = this.state.remoteVideo;

  if(session && remoteVideo) {
    session.createStream({
      name: streamName,
      display: remoteVideo
    }).on(STREAM_STATUS.PENDING, (stream) => {
      let video = document.getElementById(stream.id());
      if (!video.hasListeners) {
        video.hasListeners = true;
        video.addEventListener('resize', (event) => {
          FPUtills.resizeVideo(event.target);
        });
      }
    }).on(STREAM_STATUS.PLAYING, (stream) => {
      ...
    }).on(STREAM_STATUS.STOPPED, () => {
      ...
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).play();
  }
}

```

7. Получение события, подтверждающего воспроизведение

STREAM_STATUS.PLAYING [code](#)

```

playStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.playStreamName;
  let remoteVideo = this.state.remoteVideo;

  if(session && remoteVideo) {
    session.createStream({
      name: streamName,
      display: remoteVideo
    }).on(STREAM_STATUS.PENDING, (stream) => {
      ...
    }).on(STREAM_STATUS.PLAYING, (stream) => {
      app.setState({playStatus: STREAM_STATUS.PLAYING, playStatusClass: 'text-success'});
      app.onPlaying(stream);
    }).on(STREAM_STATUS.STOPPED, () => {
      ...
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).play();
  }
}

```

8. Остановка воспроизведения

Stream.stop() [code](#)

```

onPlayClick = () => {
  let app = this;
  let stream = this.state.playStream;
  ...

  if (!stream) {
    ...
    app.playStream();
  } else {
    app.setState({playButtonDisabled: true});
    stream.stop();
  }
}

```

9. Получение события, подтверждающего остановку воспроизведения

STREAM_STATUS.STOPPED [code](#)

```

playStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.playStreamName;
  let remoteVideo = this.state.remoteVideo;

  if(session && remoteVideo) {
    session.createStream({
      name: streamName,
      display: remoteVideo
    }).on(STREAM_STATUS.PENDING, (stream) => {
      ...
    }).on(STREAM_STATUS.PLAYING, (stream) => {
      ...
    }).on(STREAM_STATUS.STOPPED, () => {
      app.setState({playStatus: STREAM_STATUS.STOPPED, playStatusClass: 'text-success'});
      app.onStopped();
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).play();
  }
}

```

10. Остановка публикации

Stream.stop() [code](#)

```

onPublishClick = () => {
  let app = this;
  let stream = this.state.publishStream;
  ...
  if (!stream) {
    ...
    app.publishStream();
  } else {
    app.setState({publishButtonDisabled: true});
    stream.stop();
  }
}

```

11. Получение события, подтверждающего остановку публикации

STREAM_STATUS.UNPUBLISHED [code](#)

```

publishStream = () => {
  let app = this;
  let session = this.state.session;
  let streamName = this.state.publishStreamName;
  let localVideo = this.state.localVideo;

  if(session && localVideo) {
    session.createStream({
      ...
    }).on(STREAM_STATUS.PUBLISHING, (stream) => {
      ...
    }).on(STREAM_STATUS.UNPUBLISHED, () => {
      app.setState({publishStatus: STREAM_STATUS.UNPUBLISHED, publishStatusClass: 'text-success'});
      app.onUnpublished();
    }).on(STREAM_STATUS.FAILED, () => {
      ...
    }).publish();
  }
}

```

12. Закрытие соединения с сервером

Session.disconnect() [code](#)

```

onConnectClick = () => {
  let app = this;
  let url = this.state.serverUrl;
  let session = this.state.session;

  if (!session) {
    ...
  } else {
    app.setState({connectButtonDisabled: true});
    session.disconnect();
  }
}

```

13. Получение события, подтверждающего закрытие соединения

SESSION_STATUS.DISCONNECTED [code](#)

```

onConnectClick = () => {
  let app = this;
  let url = this.state.serverUrl;
  let session = this.state.session;

  if (!session) {
    ...
    Flashphoner.createSession({urlServer: url}).on(SESSION_STATUS.ESTABLISHED, (session) => {
      ...
    }).on(SESSION_STATUS.DISCONNECTED, () => {
      app.setState({sessionStatus: SESSION_STATUS.DISCONNECTED, sessionStatusClass: 'text-success'});
      app.onDisconnected();
    }).on(SESSION_STATUS.FAILED, () => {
      ...
    });
    ...
  }
}

```
