Using and accessing manager command line

You get access to WCS manager CLI via SSH. To open it you can use a Linux-SSH command line client or any other, for instance, Putty.

```
ssh -p 2000 localhost
username: admin
password: admin
```

In production, change the username and the password to secure ones. Please refer to the WCS Manager Settings section to learn how to do this.

Type help in the command line to receive information on commands.

```
> help
Try one of these commands with the -h or --help switch:

NAME       DESCRIPTION
add        Add properties
grep       search file(s) for lines that match a pattern
start      Start command
