

Using standard video controls when publishing or playing a stream

Since WebSDK build [2.0.224](#) it is possible to enable standard video controls when publishing or playing a stream with `useControls` stream option, for example

```
function playStream(session) {  
    var streamName = $('#streamName').val();  
    var options = {  
        name: streamName,  
        display: remoteVideo,  
        useControls: true  
    };  
    ...  
    stream = session.createStream(options).on(STREAM_STATUS.PENDING, function (stream) {  
        ...  
    });  
    stream.play();  
}
```

In this case HTML5 video element will display standard controls, for example (the screenshot from Safari 16 browser)
