Building SFU SDK from source

1. Download sources

```
git clone https://github.com/flashphoner/sfu_sdk.git
```

2. Install npm

```
wget -qO- https://raw.githubusercontent.com/nvm-sh/nvm/v0.39.1/install.sh | bash
nvm install 16
```

3. Install npm dependencies

```
cd sfu_sdk
nvm use 16
npm install
```

Since build 2.0.214, on this stage, `wrtc.node` binary file implementing `setLocalDescription()` method args free call will be downloaded to `node-webrtc` module. It is necessary for SFU SDK tests to work successfully, while `node-webrtc` does not support this feature yet, and the module is not updtaed for a long time.

4. Build SFU SDK

```
npm run build
```
