Main commands

WCS is managed using the following main commands:

1. Operating system command line

Command	Description
Main commands to start and stop the server	
service webcallserver start	Start the server
service webcallserver stop	Stop the server
service webcallserver restart	Restart the server
Additional commands	
/usr/local/FlashphonerWebCallServer/bin/webcallserver start	Start the server
/usr/local/FlashphonerWebCallServer/bin/webcallserver start standalone	Start the server in the stdout output mode for debug purposes
/usr/local/FlashphonerWebCallServer/bin/webcallserver stop	Stop the server

2. WCS core command line interface

Command	Description
show server-status	Show the current status of the server: the number of active connections, ports, streams, CPU time consumed, RAM and disk usage, overall amount of sent and recived data as well as elapsed time of the server.
show users	Show the list of users
show node-settings	Show current server settings or export them to a CSV file
add user	Add a new user
update user	Change user data
remove user	Remove a user
show apps	Show all available applications
add app	Add a new application
update app	Change applications settings
remove app	Remove an application

You can read a through description of the WCS core command line interface inthis section.
