Accessing the stand containers

SSH access into the containers

All the stand containers are available by SSH (port 22). Private and public SSH keys should be placed to ssh folder, in this case public SSH key will be copied to container:

```
ssh
 |--id_rsa
 |--id_rsa.pub
```

Containers can be accessed with the following command

```
ssh -i ssh/id_rsa root@172.16.11.4
```

Where

- `id_rsa` - private key
- `172.16.11.4` - container IP address

Access fron the docker host

Containers are accessible by the standard Docker way

```
sudo docker exec -it wcs-test-stand-o-test1 /bin/bash
```
