CDN 2.5

Overview

CDN 2.5 implements the following features in addition to CDN 2.1, 2.2, 2.3 и 2.4:

· remove nodes from CDN

Remove nodes from CDN

When a node leaves CDN, another nodes remember this node as PASSIVE and periodically try to restore connections to it. To prevent excessive reconnect attempts and actualize CDN state, since build 5.2.708 inactive node can be removed from CDN

Using REST API

REST API is used to remove node from CDN. The query should be sent to active CDN node.

REST query should be HTTP/HTTPS POST request as follows:

- HTTP: http://test.flashphoner.com:8081/rest-api/cdn/remove_node
- HTTPS: https://test.flashphoner.com:8444/rest-api/cdn/remove_node

Where:

- test.flashphoner.com WCS server address
- 8081 a standard WCS REST / HTTP port
- 8444 a standard WCS HTTPS port
- rest-api mandatory part of URL
- /cdn/remove_node REST query used

REST queries and responses

REST query	Request body	Response status	Description

REST query	Request body	Response status	Description
`/cdn/remove_nod e`	{ "nodeId":"1 92.168.1.20 7" }	200 OK 400 Bad re quest 404 Node n ot found 500 Inter nal Server Error	Remove node fro m CDN

Parameters

Parameter	Description	Example
nodeld	Node IP address to remo ve	`192.168.1.207`

Known limits

- 1. Only PASSIVE node can be removed from CDN. The query will return Active node can't be removed while trying to remove ACTIVE node.
- 2. If node removed enter CDN again (for example, after restarting), another nodes will reconnect to it automatically.

Backward compatibility

A node can be removed from CDN only on CDN 2.5 nodes
