

Connections management

connection debug-add

Enable client debug logs for all the sessions from this IP address

Parameters:

- `-a | --address` - IP address (mandatory)

Example:

```
connection debug-add -a 192.168.0.100
```

```
% connection debug-add -a 192.168.0.100  
IP address added
```

connection debug-remove

Disable client debug logs for all the sessions from this IP address

Parameters:

- `-a | --address` - IP address (mandatory)

Example:

```
connection debug-remove -a 192.168.0.100
```

```
% connection debug-remove -a 192.168.0.100  
IP address removed
```

connection debug-cleanup

Disable client debug logs for all the sessions from all IP address

Example:

```
connection debug-cleanup
```

```
% connection debug-cleanup  
Debug list cleaned
```

connection debug-show

Show IP addresses list for which client debug logs recording is enabled

Example:

```
connection debug-show
```

```
% connection debug-show  
IP ADDRESS  
-----  
192.168.0.100
```
