

# Using and accessing CLI v 2

You can get access to core CLI v 2 via SSH. To open it you can use a Linux-SSH command line client or any other, for instance, Putty.

```
ssh -p 2002 localhost
username: admin
password: admin
```

In production, change the username and the password to secure ones. The username can be changed in `database.yml` file, the password can be changed using command line.

[Public key authentication](#) is also supported.

Type help in the command line to receive information on commands.

```
% help
Try one of these commands with the -h or --help switch:

NAME      DESCRIPTION
stream    Stream command
cdn        CDN commands
help       provides basic help
repl       list the repl or change the current repl

% |
```
