

WebSocket connection timeout

Since build [0.5.28.2753.125](#) it is possible to set WebSocket connection establishing timeout while session creation. To do this, `timeout` parameter in milliseconds should be passed to `createSession` function:

```
var url = "wss://test.flashphoner.com:8443";
var tm = 1000;

Flashphoner.createSession({urlServer: url, timeout:
tm}).on(SESSION_STATUS.ESTABLISHED, function (session) {
    ...
});
```

In server does not respond in this time, client will receive the `SESSION_STATUS.FAILED` event.
